Dr. Coleman M. Sheehy III  
Email: coleman3@ufl.edu  
Office: 511 Carr Hall  
Office Hours: Mon and Wed, 6:00-6:30pm or by appointment (email to set up)

Classroom: 211 Bartram Hall (BAR 211)  
Monday (section 016F) Period 10 (5:15-6:00pm)  
Wednesday (section 0952) Period 10 (5:15-6:00pm)

Course Objectives & Policies

Objectives:

As you begin your career as an undergraduate student at UF, this course provides an introduction to the field of biology and UF resources specific to that discipline. It is expected that this course will be taken the first semester after declaring a biology, zoology, botany (or related) major. In order to encourage interactions between you and the faculty instructor, the class size has been kept small.

We will have discussions about and inquiries into the following topics:

1. The nature of science (hypothesis testing, peer review, grant funding)  
2. Accessing the scientific literature  
3. Independent undergraduate research  
4. Facilities at the university  
5. Advising and career resources  
6. Library resources and databases  
7. Scientific ethics: proper citation of the literature, the ethical use of animals, etc.  
8. Opportunities for faculty/student interactions.

We will use Evolutionary Biology as a thematic area around which to center our discussions.

Textbooks:

There is no required text in this course, but readings will be assigned from books and journal articles; these will be made available electronically through the class Canvas site.

Course Assignments and Grading: Points will be given for good-effort completion of assignments (detailed information on assignments 1-8 can be found on the class Canvas site under the Assignments tab).
Full credit for each assignment requires following instructions on the Canvas site and submitting assignments by the due date and time. Assignments that are more than 1 week late may not be graded. Contact the instructor well in advance to make arrangements for late assignments due to planned activities. If an assignment is late due to an unforeseen emergency or illness, documentation of the situation will be required. All other late assignments will be unexcused.

1. Develop an Academic Plan (or alternative assignment): Meet with a Biology Advisor and plan 2 years of coursework in your major; an alternative assignment for CLAS majors is to write a short essay on career options. Note: The short essay is an alternative assignment for students that are close to graduation.

2. Annotate 1 Reference. Keeping track of what you’ve read and where is a key component of proper citation. Try the annotated bibliography approach to summarizing what you read in a primarily literature source.

3. Create a Bibliography: Using the database search engines available at UF and reference software (e.g., EndnoteWeb) as explained in the Library Tutorial, conduct a literature search on a research topic and submit a formatted bibliography.

4. Write a 3-page Paper on a topic in Biology you find interesting (see Bibliography for ideas and discuss ideas with instructor).

5. Review a classmate’s paper (see #4 above). Provide an anonymous, constructive review of a peer’s first paper submission.

6. Revise your paper based on comments provided during the anonymous review (see #5 above).

7. Complete Animal Care and Use Training. Online training is required for every person who will have contact with animals in a research (or classroom) setting. Complete the basic online training module Working with the UF IACUC (non-VA version).

8. Complete CHOMP questionnaire. UF has purchased access to several programs to aid in the discovery of your “best-fit” major and career. These are free resources that help you to set your eyes on a path that will ultimately suit you.

9. Class Participation. Participation in class discussions is key to your success of this course, attendance will be documented and participation in class discussions noted. Arriving more than 20 minutes late will be considered as not attending that class.

Class discussions

A goal of this course is discussion, and learning to discuss is a critical skill to aid in your college success. Be prepared to participate in the class discussions by completing reading assignments and exercises when assigned. During discussions, recognize that in many respects there is no single answer to a question and much is yet unknown in biology. In class discussions, please be courteous to others and respectful of alternative views. All of you are encouraged to ask either factual or interpretative questions and discuss the assigned reading material. Please refrain from side-bar discussions and distracting behavior.

Grading scale

This is an S/U course, so your performance will be either S (satisfactory) or U (unsatisfactory). To earn an “S” in the course, you must complete all required assignments (i.e., paper, review and paper revision) and earn a total of 37 (74%) of 50 possible points via the completion of assignments and participation in the course.
Course policies

Readings should be done in advance of class; you are expected to come ready to discuss the topics. In cases of major medical and/or family emergencies, as officially documented by a letter, students can negotiate an incomplete for the term. Consistent with University policy, Incompletes will revert to E if not completed within 1 term.

Academic Honesty & Plagiarism

Quoted from the UF Website:

“Preamble: In adopting this Honor Code, the students of the University of Florida recognize that academic honesty and integrity are fundamental values of the University community. Students who enroll at the University commit to holding themselves and their peers to the high standard of honor required by the Honor Code. Any individual who becomes aware of a violation of the Honor Code is bound by honor to take corrective action. Student and faculty support are crucial to the success of the Honor Code. The quality of a University of Florida education is dependent upon the community acceptance and enforcement of the Honor Code.

“The Honor Pledge: We, the members of the University of Florida community, pledge to hold ourselves and our peers to the highest standards of honesty and integrity by abiding by the Honor Code.

“On all work submitted for credit by students at the University of Florida, the following pledge is either required or implied: "On my honor, I have neither given nor received unauthorized aid in doing this assignment."
